SUMMARY

Frontend engineer (TypeScript, Vue, React) with 4 years in production. Builds the frontend of Turkmenistan Railways' freight tariff system, and ships his own products end to end: an EPUB reader on Google Play and a paid invitation app.

EXPERIENCE

MilliGoshant Frontend Developer, client: Turkmenistan Railways — Dec 2022 – present

- Built the **station-fees billing app** as its main developer: per-wagon charges, printed bills, and overcharge and undercharge corrections, in Vue 3 and TypeScript.
- Built most of the **freight logistics workspace** that replaced a legacy app: a spreadsheet-style wagon table with keyboard navigation, autosave, duplicate checks and live price calculation.
- Built the touchscreen Vue UI of a **Tauri kiosk app** on station payment terminals (2024–2025; later rewritten natively in Rust).
- Work in a small frontend team alongside a Go backend team.

Vue 3 · TypeScript · Pinia · TanStack Table · Tailwind CSS · shadcn-vue · Tauri

PROJECTS

Lyne EPUB reader — lyne.page

Cross-device reader that syncs the library and exact reading position everywhere. React PWA on Supabase, plus a native Kotlin/Compose Android app. **100+ installs on Google Play.**

Bileje Date invitations — bileje.biz

Playful date invitations sent as a link, with animated openings and the reply sent back to the sender. React 19, Motion, Supabase; Russian and Turkmen. Launched October 2026, **first paying customer**.

date-fns Turkmen locale Open source — PR #3845

Turkmen (tk) locale for date-fns, proposed upstream (pull request open).

SKILLS

LANGUAGES	TypeScript, JavaScript, HTML, CSS
FRAMEWORKS	Vue 3, Nuxt, React, Next.js
STATE & DATA	Pinia, Zustand, Redux Toolkit, TanStack Table, Supabase
UI	Tailwind CSS, shadcn-vue, Motion, GSAP, accessibility (WCAG)
TOOLS	Vite, Tauri, Git

EDUCATION

Oguzhan Engineering and Technology University BEng — 2019 – 2024

Thesis: a food-delivery robot for restaurants, with a Next.js QR ordering app for guests.

LANGUAGES

Turkmen (native) | English (B2) | Russian (basic)
